Harbor Health

Essential Family | Fictional health policy | Option A

A synthetic policy wording for a two-adult family floater. All money is INR. These are invented contract terms, not a real insurance product or medical advice.

Company: Harbor Health.
Product: Essential Family.
Sum insured: 500000.
Annual premium inclusive: 18000.
Room rent limit per day: 5000.
Proportionate deduction: Yes.
Copay: 0.2.
Deductible per claim: 10000.
Cataract sublimit per eye: 40000.
Initial wait days: 30.
Specific wait months: 24.
Preexisting wait months: 36.
Restoration count: 1.
Restoration amount: 500000.
Ncb per claim free year: 0.1.
Ncb max: 0.5.

Cover schedule

One annual family pool covers two demo adults aged 35 and 32. Premium is the total amount charged, inclusive of any applicable taxes. Renewal premiums are not guaranteed. The following page defines the exact claim order and worked examples.

How a claim is paid

Essential Family | Clause order and examples

1. Waiting periods

Non-accident admissions before day 30 are excluded. Accidents are exempt from the initial waiting period. Cataract and hernia have a 24-month specific waiting period. Declared pre-existing conditions have a 36-month wait. If several waits apply, all must have expired. At the exact boundary cover starts.

2. Claim calculation, in this order

Start with admissible hospital charges, excluding non-medical items. After waiting periods, cap cataract claims at the stated per-eye sub-limit. Next apply the room rule, then subtract the per-claim deductible (floor zero), then apply the co-pay to the remaining amount, then cap payment at remaining sum insured. Out-of-pocket equals the original hospital bill minus the insurer payment.

Room rule: multiply the whole eligible claim by min(1, room limit / actual daily room cost). This fictional proportionate deduction includes room and all linked medical charges.

3. Restoration and no-claim bonus

After the pool is fully exhausted, restore the base sum insured once per policy year for a subsequent unrelated admission. Restoration cannot top up the claim that exhausted the pool and cannot be used for the same illness. At renewal, a claim-free year adds the stated NCB share of base cover, up to the stated maximum. Any paid claim resets accumulated NCB to zero at the next renewal. Restoration expires at year end; base cover and NCB form the new opening pool.

4. Worked examples (all waiting periods satisfied)

General treatment: bill INR 100000, four days in an INR 8000/day room, no exclusions or sub-limit, full pool remaining. Room ratio 5000/8000 = 0.625. Eligible amount 62500; less deductible 10000 = 52500; insurer pays 80% = 42000. Family pays 58000. At INR 4000/day with the same bill, insurer pays (100000 - 10000) x 80% = 72000; family pays 28000.

A non-accident admission on day 10 with an INR 50000 bill pays zero under either policy. These worked examples define this fixture only; production rules must follow the policy actually uploaded by the user.
